## COMMENTS

What were the strongest points of the TA in discussion section or office hours?

- Example problems
- Helped the students on how to do the math/calculation portions of the course if we were confused from the readings/lectures and always posting the discussion notes online is greatly appreciated.
- Her worksheets that she sent out after each discussion were amazing and professionally made. I wish more TA's would also do this.
- None
- She was very honest and tried to help us understand hard concepts
- She went over the calculations that we needed to understand. And made notes for us. Extremely helpful.
- Very organized notes and I appreciate that we were emailed those notes afterwards.
- not helpful
- notes were clear
- responsible
- 12 blank answers

Do you have any recommendations for your TA that would help that person be a more effective TA in the future?

- - Don't brush off students as if they are dumb. Actually try to help them instead when they're asking you a question. I know you know the material but the way you try to explain doesn't make me understand the material any better. I leave feeling confused and upset at the way I was treated. - Try to teach students more effectively instead of speeding through everything just like the professor. - Go through concepts so that we understand what we're learning instead of only doing what the professor asks in telling you to only do exercise problems.
- Make sure students understand concepts before diving deep into calculations.
- Nothing I can think of.
- She was pretty good.

- Skimmed over some material
